Distributor Agreement Brings EnviroWashout to the Australian Construction Industry

HOUSTON – JUNE 29, 2009 - Waste Crete Systems, LLC, inventor of the EnviroWashout System and a pioneer in providing environmentally friendly closed-loop concrete washout solutions, today announced that they have signed an exclusive agreement with PumperDump™, of Sydney Australia.

The two companies will be working together to introduce the EnviroWashout concrete washout system into the Australian construction industry. The EnviroWashout system will reduce on-site job pollution and will dramatically increase efficiencies associated with all aspects of a concrete pour.

Ricki Abney, Sr., President of Waste Crete Systems, stated, “I am confident that the agreement will be mutually beneficial. We have already developed a good working relationship with Mr. Richard Amadio, Director of PumperDump Pty Ltd, who has been the force behind the growth of PumperDump in Sydney.”

PumperDump has been operating in Australia over the past five years. “With the PumperDump patented Concrete Waste Separation Unit (CWSU), we have been the market leader in the area of concrete washout waste. We expect that the water recycling aspect of the EnviroWashout system will be a significant market driver in this drought stricken nation,” says Mr. Amadio.

“The addition of the EnviroWashout system to the PumperDump business will enable us to enter a different part of the market which up to now has been difficult to get into,” states Mr. Amadio.

About Waste Crete Systems

Based in Houston, TX, Waste Crete Systems, LLC, is the inventor of the EnviroWashout concrete wastewater filtering and removal system that provides builders and contractors with the optimum solution for concrete wastewater compliance. The EnviroWashout System is the only concrete washout solution that prevents nearly 100% of rainwater and groundwater contamination throughout the building process with patent pending closed-loop concrete wastewater recycling, treatment and handling technology. For additional information, visit the EnviroWashout Website at www.envirowashout.com.

About PumperDump™

PumperDump™ is an Australian proprietary limited company that has a patented concrete waste separation unit (CWSU). This metal unit collects, separates, and facilitates transportation of the liquid and solid waste to an appropriate recycling depot at the end of a concrete pour. Widespread adoption of CWSUs has the potential to change existing waste disposal processes with significant benefits for the construction companies, the pump truck operators and the environment. For additional information, visit the PumperDump™ website at <http://www.pumperdump.com.au>
